

Smt. Radhikatai Pandav College of Engineering

Near Dighori Naka , Umred Road Nagpur

UGC AUTONOMOUS INSTITUTE

(Managed by Sanmarg Shikshan Sanstha, Nagpur)

NAAC Accredited with B Grade | AICTE Approved

Affiliated to RTM Nagpur University | Recognised Under Section 2(f) of UGC Act 1956

Scheme of Examination

B. Tech. Computer Science & Engineering (1st to 8th Semester)

Curriculum

(2026-30)

(Approved by the Board of Studies and Academic Council)

VISION OF THE INSTITUTE

"To Empower Students With Knowledge, Skills, And Ethical Values, Driving Innovation And Bridge Academic Excellence With Real-World Applications In Engineering Technology And Management."

MISSION OF THE INSTITUTE

1. To provide quality education in engineering technology and management through innovative teaching methodologies and industry collaboration.
2. To develop skilled professionals with strong ethical values, leadership qualities, and a problem-solving mindset.
3. To promote interdisciplinary learning through collaboration with industry, academia, and research institutions.
4. To build a strong alumni network that fosters mentor ship , innovation and community engagement.

VISION OF THE DEPARTMENT

"Cultivating Competent Professionals To Create Innovative, Ethical, Intelligent, And Sustainable Computing Solutions Through Computer Science & Engineering Education."

MISSION OF THE DEPARTMENT

M1	Deliver high-quality Computer Science & Engineering education through outcome-oriented teaching, advanced technologies, experiential learning, and hands-on practice.
M2	Encourage creativity, research, analytical thinking, and entrepreneurial skills to build smart computing solutions that address practical and societal problems.
M3	Instill professional ethics, strengthen industry engagement, promote continuous learning, and encourage social commitment to prepare globally competent engineers.

Prof. K. K. Sankar

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Engineering Knowledge and Technical Expertise

Graduates will utilize fundamental and advanced concepts of Computer Science & Engineering education along with emerging technologies to analyze, design, and develop efficient computing systems that meet industrial and societal requirements.

PEO2: Professional Excellence and Continuous Development

Graduates will exhibit professional ethics, effective communication, collaborative teamwork, leadership qualities, and a commitment to lifelong learning to achieve success in careers, higher studies, and entrepreneurial ventures.

PEO3: Research, Innovation, and Social Responsibility

Graduates will create innovative, sustainable, and intelligent computing technologies through research, creativity, and responsible engineering practices to solve contemporary societal and technological challenges.

PROGRAMME OUTCOMES (POs)

PO1: Engineering Fundamentals

Utilize the principles of mathematics, basic sciences, engineering concepts, and Computer Science & Engineering education to address and solve complex computing challenges.

PO2: Analytical Thinking

Examine, interpret, and formulate complex computing problems by applying logical reasoning, analytical skills, and appropriate engineering methodologies.

PO3: System Design and Development

Develop, implement, and assess intelligent, secure, dependable, and sustainable computing systems that satisfy user expectations and societal requirements.

PO4: Research and Investigation

Apply research methodologies, experimentation, data interpretation, and emerging technologies to investigate engineering problems and generate innovative computing solutions.

S.R. Lakshman

G. H. S.

Prof. S. B. Borkar

Prof. C. A. Borkar

A. K. R. Sarode

PO5: Contemporary Engineering Tools

Employ modern software tools, programming environments, artificial intelligence, cloud computing technologies, cyber security practices, and engineering platforms to solve real-world computing problems.

PO6: Professional Ethics

Practice ethical values, professional accountability, and legal responsibilities while designing, developing, and deploying computing technologies.

PO7: Effective Communication and Collaboration

Communicate technical information effectively with diverse audiences and contribute productively as an individual or team member in multidisciplinary environments.

PO8: Leadership and Management Skills

Demonstrate leadership, project planning, entrepreneurial mindset, and managerial abilities for successful execution of engineering projects and organizational responsibilities.

PO9: Social and Environmental Responsibility

Develop computing solutions that contribute to society while promoting sustainability, environmental awareness, inclusiveness, and global citizenship.

PO10: Continuous Learning

Pursue lifelong learning and continuously enhance technical expertise and professional competencies to keep pace with advancements in computing technologies

PO11: Life-Long Learning

Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO1: Technical Proficiency

Apply core Computer Science & Engineering education concepts and modern technologies to design, develop, and deploy secure, intelligent, and efficient computing solutions for real-world applications.

PSO2: Professional and Innovative Competence

Demonstrate innovation, ethical practices, research, teamwork, entrepreneurship, and lifelong learning to address industrial and societal challenges.

Sem-I	Total Hours Distribution Per Week		
Total Credits : 3	Lecture (L) : 3 Hrs	Tutorial/Activity (T/A) : 0 Hr	
Subject Code	BT1CS01T/BT1CE01T	Engineering Mathematics-I	
Examination Scheme			
CIE	ESE	Minimum Passing Marks:	Examination Duration:
40 Marks	60 Marks	50	3 Hours

Course Objectives

1	Engineering Mathematics intent to equip first-year engineering students with fundamental mathematical tools.
2	To promote and develop the basic mathematics skills of engineering students that is essential for effective understanding of engineering subjects.

Course Outcomes

After completion of syllabus, students would be able to	
1	Using the concept of successive differentiation, express the function in series form and evaluation of indeterminate forms.
2	To study the evaluation of definite and improper integrals by using Beta and Gamma function. Also study to trace the curve.
3	By using the concept of matrix operation to study the Eigen values and Eigen vectors
4	To study the basic fundamental concepts of linear algebra, such as inner product space, bases and dimensions, vector space, subspace, linear transformations, and inner product space.
5	To study the nature of different types of sequence and series based on their convergence.

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
Unit-1: Differential Calculus			
Successive differentiation: Leibnitz's Rule, Taylor's and Maclaurin's series for function of one variable, Indeterminate forms and L'Hospital's Rule.	7		1
Unit-2 Integral Calculus			
Evaluation of Definite and Improper Integrals: Beta and Gamma functions and their properties, Mean value, Mean square value and Root mean square value, Tracing of curves (Cartesian), Applications of definite integrals to find length of curve, area, volume.	8		2
Unit-3 Linear Algebra-I			
Linear dependence of vectors, Eigen values and Eigen vectors, Reduction to diagonal form, Largest Eigen value and its corresponding Eigen vector by iteration method, Gaussian elimination, LU Decomposition (Crout's method).	7		3
Unit-4 Linear Algebra-II			
Vector Space; Subspaces; Basis; Dimension; Linear transformation; Range Space and Rank; Null Space and Nullity; Rank nullity theorem, Matrix Representation of a linear transformation; Inner Product Spaces: Norm; Orthonormal Sets, Positive definite matrices, Singular Value Decomposition, Gram-Schmidt process.	7		4
Unit-5 Sequence and Series			
Sequence, Test of convergence of sequences, Cauchy sequence, infinite series, power series, Alternating series, Tests of convergence of series: P-series, Comparison test, D'Alembert's ratio test, Cauchy nth root test and Raabe's test.	7		5

Subject Code	BT1CS02T/BT1CE02T	Applied Chemistry	
Examination Scheme			
CIE	ESE	Minimum Passing Marks:	Examination Duration:
40 Marks	60 Marks	50	3 Hours

Course Objectives	
1	To provide fundamental knowledge of electrochemistry necessary to understand the function of batteries.
2	To gain an understanding of the rare earth metals and waste handling generated out of their uses.
3	Explain the synthesis and characterization techniques used for nanomaterials.

Course Outcomes	
After completion of syllabus, students would be able to	
1	Analyze the various industrial problems arising water quality and their remediation.
2	They will understand the role of nanomaterial's and their applications.
3	Students will be able to apply the basics concepts of battery technology & energy storage devices.
4	Understand the degradation of metal kinetics of corrosion and implement corrosion control method.
5	Students will able to solve problems regarding rare earth elements, the correct disposal methods of e-wastes and while creating any tool they will keep this environmental aspect in mind.

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
Unit-1: Water Chemistry			
Introduction, potable water quality parameters hardness types of hardenss sterilization desalination of water by RO softening of water by zeolite process and ion exchange, demineralization of water, numerical based on zeolite process , boiler trouble –Scale and slugde	7		1
Unit-2: Nanomaterial's for engineering applications			
Introduction of nanomaterial's, Synthesis of nanomaterials- Top down and bottom-up approach. Carbon nanomaterials: Types, properties and applications of CNT and graphene. Applications of nanomaterial. Chemical sensor types and application	7		2
Unit-3:Electrochemical Power system			
Fundamental of Electrochemical energy storage and modern battery technologies. Topics include basic electrochemistry, electrochemical cell Lithium cobalt oxide, Super capacitors with examples and applications. Introduction, characteristics of H ₂ -O ₂ fuel cells, amorphous Si and quantum dye sensitized solar cells.	8		3
Unit-4: Corrosion			
Corrosion- Introduction , Cause, Types (dry, wet,diffential aeration) , Prevention method (cathodic protection, Protective coating , galvanizing, Tinning)	7		4
Unit- 5: Sustainable material and E-waste			
Introduction source composition characteristic and need of E-waste management, E- waste environmental and health risks, Extraction of rare earth and precious metals from e-wastes, Twelve principles of Green Chemistry. Green Computing, Role of Green Computing in Environment and Research, Green devices and Green data Servers.	7		5

Sr. no	<u>List of Practical (Any 6-performance based and 1 virtual lab experiment</u>
1.	Estimation of Copper estimation (iodometrically)
2.	Estimation of Ni by complexometry
3.	To determine the rate of corrosion of given metal specimen by the weight-loss method.
4.	Estimate the amount of dissolved oxygen present in water sample.
5.	Acid base titration by Potentiometry.
6.	Acid base titration by conductometry
7.	To determine the total hardness of given water sample by EDTA complexometry method.
8.	Virtual Lab: Beer's Law verification by spectrophotometer.

B.TECH. COMPUTER SCIENCE & ENGINEERING

Course Category	Engineering Science Course –I (ESC-I)		
Sem:I	Total Hours Distribution per week - 3		
Total Credit: 3	Lecture (L): 3Hrs	Tutorial/Activity(T/A): –00	
Subject Code	BT1CS03T(Th)	Programming in ‘C’	
Examination Scheme			
Continuous Internal Evaluation (CIE)Marks	Semester End Exam(SEE)Marks	Minimum Passing Marks	Examination Duration
40	60	50	3 Hours

Course Objectives	
1	To understand the basics, history, and structure of the C programming language
2	Develop simple C programs to illustrate the applications of different data types such as arrays, pointers, functions

Course Outcomes	
After successful completion of this course the student will be able to:	
CO1	Understand the fundamentals of C programming and apply algorithms, flowcharts, data types, operators, and expressions to solve basic programming problems. Mapped with Unit-I
CO2	Design and implement C programs using conditional and iterative control structures to solve complex computational problems efficiently. Mapped with Unit -II
CO3	Analyze and develop optimized C solutions using arrays, matrices, and string manipulation techniques for computational and data-processing applications. Mapped with Unit-III
CO4	Use and create functions for modular programming Mapped with Unit-IV
CO5	Design and implement efficient C programs using pointers and file handling techniques for effective memory management and persistent data processing. Mapped with Unit-V

Session:2026-27

BOS:- CE&CSE Version-I

W.e.f:-01/July/2026

SYLLABUS	
Contents	No. of hours
Unit I introduction to C: History of C, Features of C, Structure of C program, Character Set, C Tokens, Keywords, Identifiers, Constants, Variables, data types, Operators, variable declaration, Assigning Value to variable, Introduction to Computing: Algorithm, Flowchart, Representation of Algorithm and Flowchart with examples. Operator and Expression: Arithmetic, Relational, Logical, Assignment, Increment and Decrement, Conditional operator, Bitwise operators, sizeof operator, Arithmetic Expression, Evaluation expression. Expressions, Precedence and Associativity, Expression Evaluation, Type conversion.	9
Unit II: Conditional Statements 'if' Statement, 'if..else' statement, Nested if Statements, ladder if ... else, Ternary operator, switch case. Control Flow Statements The while Statement, The do .. while Statement, The for Statement, The break, continue Statements and goto Statement	8
Unit III One-dimensional Arrays, Declaration of One-dimensional Arrays, Initialization of One-dimensional Arrays, Example programs- Linear search, Binary search, Bubble sort, Selection sort. Two-dimensional Arrays, Declaration of Two-dimensional Arrays, Initialization of Two-dimensional Arrays, Example programs – Matrix Addition, Multiplication, Transpose of a matrix, Character Arrays and Strings: Declaring and Initializing String, String-handling Functions (strlen(), strcpy(), strcmp(), strcat(), strcmp()), Example Programs(with and without using built-in string functions), Two-dimensional character arrays.	9
Unit IV Function: Syntax and Declaration of Function, Type of Function, Create a function, Scope of function, return function, call by reference. Recursion: Recursion as a different way of solving problems.. Structure: Defining structures and Array of structures, Declaration and Initialization of structure. Unions: Union Declaration, Initializing Unions	8
Unit V Pointers: Idea of pointers, defining pointers, Declaration and Initialization of pointer, Type of pointer, Pointer using Array, pointer to pointer, Function pointer. File handling Basics Of File Handling In C., Types of Files, File Input/ Output Operations: Modes of file opening, Reading and writing the file, Closing the files, .	8

SMT. RADHIKATAI PANDAV COLLEGE OF ENGINEERING NAGPUR**AN AUTONOMOUS INSTITUTE**

AFFILIATED TO RASHTRASANT TUKADOJI MAHARAJ NAGPUR UNIVERSITY, NAGPUR

FACULTY OF SCIENCE & TECHNOLOGY**B.TECH COMPUTER SCIENCE & ENGINEERING**

Course Category	Engineering Science Course –I (ESC-I)		
Sem:I	Total Hours Distribution per week- 2		
Total Credit: 1	Practical(P): 2:00 Hrs	Tutorial/Activity(T/A):	
Subject Code	BT1CS03P (Practical)	Programming in 'C' (Lab)	
Examination Scheme			
Continuous Internal Evaluation (CIE)Marks	Semester End Exam(SEE)Marks	Minimum Passing Marks	Examination Duration
25	25	25	—

Course Outcomes

After successful completion of this course the student will be able to:

CO1	Write simple programs using input and output functions, decision making and looping constructs.
CO2	Implement various concepts of arrays and strings and pointers.
CO3	Create programs using user defined datatypes and functions in C.
CO4	Develop, Debug and Execute programs to demonstrate the basic concepts of pointers in C
CO5	Implement various concepts of files.

List of Practical's

Minimum Eight out of the following practical's shall be performed:

Sr. No.	List of Practical's
01	Execute a program to swap two variables values with and without using third variable.
02	Develop a C Program to implement a simple calculator to perform addition, subtraction, multiplication and division operations using switch construct.
03	Develop a C Program to find the roots of quadratic equation for non-zero co- efficient using if-else ladder construct.
04	Program to calculate the factorial of given number.
05	Program to generate Fibonacci sequence upto n terms.
06	Develop a recursive C function to find the factorial of a number, $n!$, defined by $\text{fact}(n)=1$, if $n=0$. Otherwise $\text{fact}(n)=n*\text{fact}(n-1)$. Using this function, develop a C program to compute the Binomial coefficient nCr . Perform input validation as well.
07	Develop a C program to find the smallest and largest elements in an array using pointers and then swap these elements and display the resultant array
08	Develop a C program to count the vowels & consonants in a given string.

(Signatures)
D.N. Talwar, P.B. Piprole, D.R. Thakur, B.S. K. Malpale, D.S. Jayaraman, M.S.S.B., P. Bhargava, P. Nigale

09	Write a C program with a recursive function to calculate the factorial of a given positive integer.
10	Program to create and display employee details using structures.
11	Program to write text to a file.
12	Program to copy contents from one file to another file.

Note:

1. Conduct minimum 08 practical's out of above list and practical no. 1 is mandatory.
2. Viva-voce question should be included in each of the practical.
3. During Continuous Internal Evaluation (CIE) practical Marks, regular performance of practicals for 10 marks, 05 Marks for Journal submission and 10 Marks for internal viva-voce examination.
4. During Semester End Exam(SEE) practical Marks ,external practical examination performance must be conducted for 15 marks and 10 Marks for viva.
5. For Eligibility of SEE Practical examination, Internal submission of Journal (Practical File)is mandatory.

Course Category	Program Core Course -X (PCC-X)		
Sem: I	Total Hours Distribution per week		
Total Credit: 01	Practical(P): 02Hrs	Tutorial/Activity(T/A):Hr.	
Subject Code	BT1CS04P(Practical)	Integrated Computer Workshop Lab	
Examination Scheme			
Continuous Internal Evaluation (CIE)Marks	Semester End Exam(SEE)Marks	Minimum Passing Marks	Examination Duration
25	25	25	—

Course Outcomes	
After successful completion of this course the student will be able to:	
CO1	Identify the components of a PC and Assemble & disassemble the same..
CO2	Experiment with installation of Operating System and Secure a computer from Cyber threats.
CO3	Develop presentation /documentation using Office tools.
CO4	Build dialogs and documents using ChatGPT.
CO5	Improve individual / teamwork skills, communication and report writing skills with ethical values..

List of Practical's

Minimum Eight out of the following practical's shall be performed:

Sr. No.	List of Practical's
01	To Study of Electronic components ICs, resistor, capacitor, Transistors MOSFET etc.
02	To study of computer peripheral devices . Identify input, output, and storage devices
03	To install and assemble computer hardware components correctly and verify their proper functioning.
04	To install the Microsoft Windows XP operating system on computer system
05	To install the LINUX operating system on a computer system .
06	To create a newsletter using Microsoft Word by applying features like columns, images, textboxes, WordArt, and basic formatting.

07	To learn basic spreadsheet operation and create a scheduler using Microsoft Excel with formatting, summation and autofill features.
08	To install and configure a software application on a computer system.
09	To study and apply the various features of Microsoft PowerPoint for creating a professional and interactive presentation.
10	To learn Local Area Network and access the Internet. In the process they configure the TCP/IP setting. Finally students should demonstrate, to the instructor, how to access the websites and email
11	To understand and practice the use of a web browser such as Google Chrome or MozillaFirefox for accessing websites, searching information, navigating web pages, and using online services effectively
12	To study and use ChatGPT for generating content such as stories, reports, and summaries. To understand how AI tools improve productivity and assist in creative and academic tasks.

Note:

1. Conduct minimum 08 practical's out of above list and practical no. 1 is mandatory.
2. Viva-voce question should be included in each of the practical.
3. During Continuous Internal Evaluation (CIE) practical Marks, regular performance of practicals for 10 marks, 5 Marks for Journal submission and 10 Marks for internal viva-voce examination.

SMT. RADHIKATAI PANDAV COLLEGE OF ENGINEERING NAGPUR.*(An Autonomous Institute)*

Affiliated to Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur.

FACULTY OF SCIENCE & TECHNOLOGY**B.TECH. COMPUTER SCIENCE ENGINEERING- Major(NEP) (CBCS)**

Course Category:	Engineering Science Course (ESC)		
Semester: I	Total Hours Distribution per week		
Total Credit: 03	Lecture (L): 3 Hrs.	Tutorial (T): 0 Hr.	
Subject Code & Subject Name:	BT1CS05T	Basics of Electrical and Electronics Engineering	
EXAMINATION SCHEME			
Continuous Internal Evaluation (CIE)Marks	End Semester Examination (ESE) Marks	Minimum Passing Marks	Examination Duration
40	60	50	3 Hours

Course Objective: -

1. To understand the fundamentals of electrical circuit elements, sources, and DC circuit analysis.
2. To understand the fundamentals of AC signals, waveforms, and AC circuit analysis.
3. To understand the fundamentals of semiconductor devices, diodes, rectifiers, and transistors.
4. To understand the fundamentals of digital logic and microprocessor architecture.
5. To understand the fundamentals of measurement systems, sensors, transducers, and PLCs.

Course Outcomes: -

1. Apply basic electrical laws and circuit reduction techniques to analyze and solve DC circuits.
2. Analyze AC circuits by applying concepts of waveforms, phasors, impedance, power, and power factor.
3. Explain the operation and applications of semiconductor diodes, rectifiers, Zener diodes, and BJTs in basic electronic circuits.
4. Explain basic logic gates, combinational circuits, and the architecture of the 8085 microprocessors.
5. Explain the principles and applications of measurement systems, sensors, transducers, and basic PLCs.

SYLLABUS**Unit I: Circuit Elements and Parameters- (10 Hrs.)**

Active and passive elements, Ideal and practical voltage and current sources, source transformation;

DC Circuits: Types Series, Parallel, Star, Delta and transformation, Energy Sources and Circuit Reduction, Kirchhoff's Laws & Applications, Ohm's laws.

Unit II: AC Circuits & Fundamentals- (08 Hrs.)

Common signals and their waveforms; instantaneous, peak, average, and RMS values; peak factor and form factor of sinusoidal wave; Study of A.C circuits of pure resistance, inductance and capacitance and corresponding voltage-current phasor diagrams; Impedance and Admittance; Power, Power factor and Power Triangle.

Unit III: Diodes and Transistor (10 Hrs.)

Introduction to Semiconductor P-N junction diodes, Biasing and Characteristics of diodes, Zener Diode, Zener diode as a voltage regulator, Photodiode, LED.

Rectifier- Half Wave Rectifier, Full wave Rectifier.

Introduction to BJT, NPN and PNP Transistor, Mode of operation.

Unit IV: Digital Circuits (08 Hrs.)

Analog vs Digital System, Basic Logic Gates (AND, OR, NOT) their Truth Tables, Universal Logic Gates (NAND, NOR) Introduction to Combinational Circuits – Adder and Subtractor.

Introduction to 8085 Microprocessor - Architecture.

Unit V: Electronics Measurement, Sensors and Instruments (08 Hrs.)

Introduction to Measurement System, Generalized block diagram of Measurement system, Static and Dynamic characteristic of measurements System, Measurement Errors and Accuracy.

Sensors and Transducers: Temperature Sensors (RTD, Thermistor, Thermocouple),

Pressure Sensors, Electro mechanical Instruments (PMMC), LVDT

Introduction to PLC (Programmable Logic Controller).

FACULTY OF SCIENCE & TECHNOLOGY

B.TECH. Computer Science and Engineering -Major (NEP) (CBCS)

Course Category	Engineering Science Course		
Semester: I	Total Hours Distribution per week		
Total Credit: 01	Lab (P): 2 Hrs	Tutorial/Activity(T/A):0. Hr.	
Subject Code& Subject	BT1CS05P	Basics of Electrical and Electronics Engg. Lab.	
Examination Scheme			
Continuous Internal Evaluation (CIE)Marks	Semester End Exam(SEE) Marks	Minimum Passing Marks	Examination Duration
25	25	25	----

Course Objective:-

1. To develop a fundamental understanding of DC electrical circuits, circuit elements, sources, network theorems, and basic circuit analysis techniques.
2. To develop a fundamental understanding of AC circuit concepts, waveform characteristics, phasor relationships, impedance, admittance, and power analysis.
3. To understand the characteristics and operation of semiconductor devices such as P-N junction diodes, Zener diodes, and transistors through practical experiments.
4. To provide a basic understanding of digital electronics, logic gates, combinational circuits, and the architecture of the 8085 microprocessor.
5. To understand measurement systems, sensors, transducers, and basic PLC-based industrial automation techniques.

Course Outcomes:-

1. Students will be able to analyze and simplify DC circuits using Ohm's law, Kirchhoff's laws, source transformation, and series-parallel/star-delta network reduction techniques.
2. Students will be able to analyze AC circuits, determine electrical parameters, and evaluate power, power factor, and phasor relationships in resistive, inductive, and capacitive circuits.
3. Students will be able to analyze the V-I characteristics of P-N and Zener diodes, demonstrate Zener voltage regulation, and evaluate the input-output characteristics and operating regions of NPN/PNP transistors in CE configuration.
4. Students will be able to analyze basic digital logic circuits, design simple combinational circuits, and explain the architecture and basic operation of the 8085 microprocessor.
5. Students will be able to analyze measurement characteristics, evaluate sensor performance, and develop basic PLC ladder logic programs for control applications.

Syllabus

List of Experiments

1. To measure Voltage, current and power in single phase circuit with resistive load.
2. To measure Voltage, current and power in single phase circuit with R-L load.
3. Determine transformer ratio (K) of single phase transformer.
4. To study the forward and reverse bias V-I characteristics of a P-N junction diode and determine the cut-in (knee) voltage.
5. To obtain the V-I characteristics of a Zener diode and verify its operation as a voltage regulator.
6. To study the input and output characteristics of an NPN/PNP transistor in Common Emitter (CE) configuration and identify its regions of operation.
7. To verify the truth tables of AND, OR, NOT, NAND, and NOR gates and demonstrate the implementation of basic gates using universal gates (NAND and NOR).
8. To implement and verify the operation of a Half Adder and Half Subtractor using logic gates.
9. To study the static characteristics of a measurement system, determine measurement errors and accuracy.
10. To study the characteristics of RTD, Thermistor, Thermocouple, and LVDT, and compare their performance.
11. To study the basic operation of a Programmable Logic Controller (PLC) and develop simple ladder
Logic programs for industrial control applications.

Course Category	Vocational & Skill Enhancement Course -VSEC-I		
Sem:I	Total Hours Distribution per week		
Total Credit:02	Practical (P): 04 Hrs	Tutorial/Activity(T/A): 0Hr.	
Subject Code	BT1CS06P	Web Design Technology Lab	
Examination Scheme			
Continuous Internal Evaluation (CIE)Marks	Semester End Exam(SEE) Marks	Minimum Passing Marks	Examination Duration
50	50	50	NA

Course Outcomes	
After successful completion of this course the student will be able to:	
CO1	Understand the fundamental concepts of the Internet and the key principles of web design.
CO2	Create basic, well-structured websites using HTML and CSS.
CO3	Develop dynamic web pages by implementing JavaScript objects, along with event handling techniques for form validation and interactivity
CO4	Build modern, interactive web application and deploy them efficiently to a live environment.
CO5	Apply Saas to write modular, acalable, and maintainable CSS, utilizing advanced features like variables, nesting and mixins for enhanced styling flexibility.

SYLLABUS

Contents	No. of hours
UNIT I: HTML (Hypertext Markup Language) CSS(Cascading Style Sheets) Basic of HTML, Text formatting, Forms and Input Element, Introduction to CSS, Selector and Properties, Layout and position, CSS Box Model. - To create a basic web page using HTML that demonstrates the use of basic HTML structure, headings, text formatting, semantic elements, lists, and hyperlinks. - To design a web page using HTML that includes forms and input elements along with proper use of headings and structured layout. - To design a structured web page layout using CSS that demonstrates layout techniques, positioning, and the CSS box model for proper spacing and alignment.	10
UNIT II: Responsive Web Design Media Queries, Fluid Layouts, Flexbox and Grid Layout, Mobile-First Design. - To design a responsive web page using media queries and fluid layouts to ensure proper display on different screen sizes. - To create a webpage layout using CSS Flexbox and Grid for effective alignment, spacing, and structured design. - To develop a responsive website using a mobile-first design approach, integrating media queries, fluid layouts, and modern layout techniques for improved user experience across	10
UNIT III: Images and Multimedia Image Formats and Optimization, Working with Images in HTML and CSS, Embedding Audio and Video, Animations and Interactive Media - To create a web page that demonstrates the use of different image formats and techniques for image optimization in HTML. - To create a web page that demonstrates the use of different image formats and techniques for image optimization in HTML. - To develop a multimedia web page that includes embedding audio and video, along with basic animations and interactive media using HTML and CSS.	10
UNIT IV: Web Accessibility Accessibility Principles and Guidelines, ARIA Roles and Attributes, Testing for Accessibility, Designing for All Users. - To design a web page following accessibility principles and guidelines, ensuring content is usable for all users. - To implement ARIA roles and attributes in a web page to improve accessibility for assistive technologies. - To test and enhance a web page for accessibility by applying accessibility testing methods and designing for all users.	09
UNIT V: Web Development Tools and Advanced Topics Text Editors and Integrated Development Environments (IDEs), Version Control with Git and GitHub, Browser Developer Tools, Debugging and Testing, Frameworks and Libraries, CSS Preprocessors (e.g., Sass), JavaScript Basics, Introduction to Content Management Systems (CMS), Web Hosting and Deployment - To explore and use text editors and IDEs, along with browser developer tools, for writing, debugging, and testing web applications. - To Study GIT and GITHUB. - To study about JavaScript.	09

Note: Create One Website After All Practicals Performed. (compulsory to All)

1. Create Ecommerce website
2. Create statics and dynamics website
3. Create user personal information website

Sem-II	Total Hours Distribution Per Week		
Total Credits : 3	Lecture (L) : 3 Hrs	Tutorial/Activity (T/A) : 0 Hr	
Subject Code	BT2CE01T/BT2CS01T	Probability and Statistics	
Examination Scheme			
CIE	ESE	Minimum Passing Marks:	Examination Duration:
40 Marks	60 Marks	50	3 Hours

Course Objectives

1	The aim is the process of managing the random events including the collection of data, its analysis and interpretation.
2	The topic covered enhances the analytical thinking power of the students dealing with the real life problems.

Course Outcomes

After completion of syllabus, students would be able to

1	Analyze the concept of Discrete and Continuous random variable, conditional probability and able to solve the problems of Probability.
2	Apply the concept of probability to analyze the various parameters of probability.
3	To understand the types of Probability distributions applying to solve the particular problems.
4	To solve the various types of problems having statistical data.
5	To solve the problems having statistical data and analyze the various parameters.

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
Unit 1: Theory of Probability			
Axioms of Probability, Conditional Probability, Baye's theorem and its examples, Review of Discrete and Continuous random variables, Joint distribution, Independent random variables, Conditional Distributions.	7		1
Unit 2: Mathematical Expectations			
Mathematical Expectations, Variance and Standard Deviation. Moments, Moment generating function, Moments about origin and about mean, measure of Skewness and Kurtosis. Conditional Expectations, Covariance and Correlation Coefficient.	8		2
Unit 3: Probability Distributions			
Binomial distribution, Poisson's distribution, Normal distribution, Uniform distribution and Exponential distribution.	7		3
Unit 4: Statistical Techniques-I			
Introduction to Correlation and Regression, Multiple correlation and its properties, Multiple regression analysis, Regression equations of three variables. Measures of central tendency: Mean Median, Quartile, Decile, Percentile and Mode.	8		4
Unit-5: Statistical Techniques-II			
Measures of Dispersion: Range, Quartile deviation, Mean deviation, Variance, Standard deviation. Coefficient of dispersion. Skewness: Tests and uses of skewness and types of distributions, Measures of skewness, Karl Pearson's coefficient of skewness, Measure of skewness based on moments.	6		5

Sem-II	Total Hours Distribution Per Week		
Total Credits : 1	Practical (P) : 2 Hrs	Tutorial/Activity (T/A) : 0 Hr	
Subject Code	BT2CE01P/BT2CS01P	Probability and Statistics Lab	
Examination Scheme			
CIE	ESE	Minimum Passing Marks:	Examination Duration:
25 Marks	25 Marks	25 Marks	3 Hours

Practical Course Objectives	
Solving problems using Open-Source Software Programming Language	

Practical Course Outcomes	
After completing the practical course, students will be able to solve the following using Open-Source Software Programming Language.	
1	Problems on the Theory of Probability.
2	Problems on the Mathematical Expectations.
3	Problems on Probability Distributions.
4	Problems on Statistical Techniques-I
5	Problems on Statistical Techniques-II

Sr. No.	List of the Practical: Performance of at least SIX practical is compulsory in a semester.
Unit-1: Theory of Probability (6 Hours)	
1	Write a Program to solve examples on Bayes theorem.
2	Write a Program to solve the examples on Joint Distribution.
Unit 2: Mathematical Expectations (04 Hours)	
3	Write a Program to solve the problem on Mathematical Expectations.
4	Write a Program to solve the problems on Moment generating function.
5	Write a Program to find the Covariance and Correlation Coefficient.
Unit 3: Probability Distributions (05 Hours)	
6	Write a Program to solve problems on Binomial distribution and Poisson's distribution.
7	Write a Program to solve problems on Normal distribution.
8	Write a Program to solve problems on Uniform distribution and Exponential distribution.
Unit-4 Statistical Techniques-I (04 Hours)	
9	Write a Program to solve the Problems on Correlation and Regression.
10	Write a Program to solve the Problems on Measures of central tendency.
Unit-5: Statistical Techniques-II (05 Hours)	
11	Write a Program to solve the problem on Measures of Dispersion.
12	Write a Program to solve the problem on Measures of Skewness.

Subject Code	BT2CE02T/BT2CS02T BT2CV02T	Applied Physics	
Examination Scheme			
CIE	ESE	Minimum Passing Marks:	Examination Duration:
40 Marks	60 Marks	50	3 Hours

Course Objectives

1	To Provide a Strong Foundation in physics to provide technical knowledge
2	To gain an understanding of the phenomenon of Optical Fibre used for advanced applications in Engineering
3	To familiarize prospective engineers with fundamental concepts of semi-conductors and their applications in semiconductor technology
4	To gain an understanding of the total internal reflection in electron optical system
5	To make acquainted with the Nano technology

Course Outcomes

After completion of syllabus, students would be able to

1	Learn the basic concepts of the dual nature of matter and wave packet and apply them to analyze various relevant phenomena and to solve related numerical problems.
2	Apply concepts in optical fibre to solve relevant numerical problems and to relate to relevant engineering applications
3	Identify and explain different types of diodes, transistors, and its applications.
4	Learn and explain Motion Of Electron in Various Electrical Devices.
5	Learn Various types of Nonmaterial and their different types.

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
Unit-1 Quantum Mechanics & Quantum Computing			
De-Broglie Hypothesis, Concept of wave-particle duality, Matter Waves, Davisson-Germer Experiment. Concept of wave packets, Heisenberg Uncertainty Principle, Significance of Wave function Ψ and normalization condition, Schrodinger wave equation (Expression for time dependent and time independent), Application to one dimensional infinite potential well , Introduction about Quantum Computer ,Explain Bit & Qubits, Quantum Entanglement , .& Numerical	7		1
Unit 2: Optical Fibre			
Structure of optical fiber, total internal reflection, modes of propagation, Classification of Fibre, Graded index profile, Single Mode and Multi Mode Numerical aperture, classification of optical fiber, Acceptance angle and cone, attenuation and dispersion, fiber optic communication system .& Numerical .	7		2
Unit 3: Semiconductor Devices			
Basic idea of free electron theory of metals ,expression of conductivity of a metals Semiconductor, Classification, Pure and doped semiconductors. Types of Semiconductor diodes - P-N junction Diode, Tunnel Diode, Zener Diode, Light Emitting Diode (LED). Transistors and it's type PNP and NPN transistors, Hall Effect, Hall voltage, and Hall coefficient; its applications. & Numericals	8		3
Unit 4: Electron optics			
Motion of electron in magnetic and electric field, Bethe's law, Electrostatic lens, CRT : Block diagram and functions of each part of CRT. CRO: Block diagram and functions of each part like trigger circuit and time base circuit. Applications of CRO	7		4
Unit 5: Nanotechnology			
Basic Concept of nanotechnology, Classification of Nano Materials, Comparison Of Properties Of Nonmaterial's With Bulk Materials, Top-down and bottom-up approach, comparison of properties of bulk and nano-materials, sol gel process and ball mill process, special types of materials, Zeolite and Graphene, applications of nanotechnology.	7		5

Sem-II	Total Hours Distribution Per Week		
Total Credits :1	Lecture (L) : 0Hrs	Tutorial/Activity (T/A) : 2 Hrs	
Subject Code	BT2CE02P/BT2CS02P /BT2CV02P	Applied Physics Lab	
Examination Scheme			
CIE	ESE	Minimum Passing Marks:	Examination Duration:
25 Marks	25 Marks	25	3 Hours

List of Experiments: Performance of at least eight experiments is compulsory in a semester.

Name of the Experiments	
1	Energy gap of semiconductor /thermistor.
2	To Study the V-I characteristics of PN junction diode.
3	To Study the V-I characteristics of Zener diode.
4	To Study the Input/Output of PNP/NPN transistor in CB and CE mode
5	To Study the V-I Characteristics of Tunnel diode..
6	To Study V-I Characteristics of Light Emitting Diodes/ Determination of Plank's constant by using LEDs.
7	Study the Diode rectification
8	Study of Hall Effect and determination of Hall Voltage of a given sample.
9	To determine the Hall coefficient (RH) with temperature
10	To study the B-H curve and find out the values of coercivity, retentivity, and saturation magnetization of the experimental material..
11	Determination of NA in optical fiber
12	Calibration of Time Base circuit of CRO and determination of AC, DC voltage & frequency of electrical signals using CRO
13	To determine the Wavelength of laser by using diffraction grating
Virtual Lab	
14	Experiment on the determination of the thickness of a thin foil using an air wedge arrangement
15	Experiment on the determination of the refractive indices of the material corresponding to ordinary and extra - ordinary rays.

B.TECH. COMPUTER SCIENCE & ENGINEERING

Course Category	Engineering Science Course IV :ESC-IV		
Sem: II	Total Hours Distribution per week		
Total Credit: 3	Lecture (L): 3 Hrs	Tutorial/Activity(T/A) :-0Hr	
Subject Code	BT2CS03T	OOPS Using Java	
Examination Scheme			
Continuous Internal Evaluation (CIE)Marks	Semester End Exam(SEE)Marks	Minimum Passing Marks	Examination Duration
40	60	50	3 Hours

Course Objectives

1	Understand the fundamentals of java programming and object oriented programming concept
2	Implement Exception Handling, multithreading, file handling
3	Design ,develop, test and Debug java applications to solve real-world problems using standard java libraries

Course Outcomes

After successful completion of this course the student will be able to:

CO1	Apply the basic syntactical constructs of Java, including classes, objects, data types, operators, etc. to solve simple programming problem. Mapped with unit1
CO2	Apply inheritance and constructors to develop object-oriented Java programs. Mapped with unit 2
CO3	Develop modular Java applications using interfaces and packages. Mapped with unit 3
CO4	Implement exception handling and multithreading for robust Java applications. Mapped with unit 4
CO5	Design basic network applications using Java networking concepts and socket programming. Mapped with unit 5

Course Category	ESC-IV		
Sem:II	Total Hours Distribution per week		
Total Credit: 01	Practical(P): 02Hrs	Tutorial/Activity(T/A): - 0	
Subject Code	BT2CS03P	OOPS Using java(Lab)	
Examination Scheme			
Continuous Internal Evaluation (CIE)Marks	Semester End Exam(SEE)Marks	Minimum Passing Marks	Examination Duration
25	25	25	-

Course Outcomes	
After successful completion of this course the student will be able to:	
CO1	Explain Java programming fundamentals and OOP concepts.
CO2	Develop Java programs using decision-making and looping statements.
CO3	Apply inheritance, polymorphism, abstraction, and encapsulation in software development.
CO4	Implement exception handling, packages, and multithreading in Java applications.
CO5	Develop applications using file handling and collection framework.

List of Practical's

Minimum Eight out of the following practical's shall be performed:

Sr. No.	List of Practical's
01	Setup Java Programming development environment using: - Command prompt.(Classpath and path setup) - Any IDE (Eclipse, Netbeans, VScode, Jcreator etc.)
02	Write programs to evaluate different types of expressions
03	Write programs to demonstrate use of: - if statements (all forms of if statement) - Switch - Case statement

SYLLABUS	
Contents	No. of hours
Unit I: Basic Syntactical Constructs in Java Java features and the Java programming environment, Defining a class, creating object, accessing class members, Java tokens and data types, symbolic constant, scope of variable, typecasting, and different types of operators and expressions, decision making and looping statements, Arrays, strings, string buffer classes, wrapper classes.	09
Unit II: Inheritance and Constructors Inheritance: concept of inheritance, types of Inheritance: single inheritance, multilevel inheritance, hierarchical inheritance, method overriding, final variables, final methods, use of super, abstract methods and classes Constructors: Constructors and methods types of constructors, method and constructor overloading, nesting of methods, command line arguments, garbage collection, visibility control: public, private, protected, default, private protected.	08
Unit III: Interface and Packages Interfaces: Define interface, implementing interface, accessing interface variables and methods, extending interfaces Package: Define package, types of package, naming and creating package, accessing package, import statement, static import, adding class and interfaces to a package	07
Unit IV: Exception Handling and Multithreading Errors and Exception: Types of errors and exceptions, try and catch statement, throws and finally statement, built-in exceptions, throwing our own exception Multithreaded programming : creating a thread: By extending to thread class and by implementing runnable Interface, Life cycle of thread: Thread methods, thread exceptions, thread priority and methods, synchronization	09
Unit V: Basics of Network Programming Socket Overview: Client/Server , reserved Sockets , proxy servers , Internet Addressing Java and the Net: The networking classes and interfaces, InetAddress : Factory Methods , Instance Methods, TCP/IP Client and Server Sockets, datagram sockets, datagram packet, The URL Class, URLConnection class.	08

S. R. Ghandhar

Dr. SSB
P. Bhandarkar

03	Write programs to demonstrate use of: • if statements (all forms of if statement) • Switch – Case statement • Different types of Loops (for, while and do..while)
04	Write programs using Wrapper Class : • to convert primitive into object. • to convert object into primitive
05	Develop a program for implementation of different types of constructors.
06	Develop program to implement: • Single inheritance. • Multilevel inheritance
07	Develop a program for implementation of interface.
08	Write programs to demonstrate use of : • Built in packages • User defined packages.
09	Write programs for implementation of try, catch and finally block.
10	Write programs for implementation of throw, throws clause.
11	Write programs using multithreading.
12	Write program to demonstrate various methods of: • URL class. • URL Connection.

Note:

1. Conduct minimum 08 practical's out of above list and practical no. 1 is mandatory.
2. Viva-voce question should be included in each of the practical.
3. During Continuous Internal Evaluation (CIE) practical Marks, regular performance of practicals for 10 marks, 05 Marks for Journal submission and 10 Marks for internal viva-voce examination.
4. During Semester End Exam (SEE) practical Marks, external practical examination performance must be conducted for 15 marks and 10 Marks for viva.
5. For Eligibility of SEE Practical examination, Internal submission of Journal (Practical File) is mandatory.

FACULTY OF SCIENCE & TECHNOLOGY

DEPARTMENT OF ELECTRONICS & TELECOMMUNICATION ENGINEERING

**B.TECH. II SEMESTER COMPUTER ENGINEERING/ ARTIFICIAL INTELLIGENCE &
DATA SCIENCE ENGINEERING /COMPUTER SCIENCE ENGINEERING
-Major (NEP) (CBCS)**

Course Category:	Engineering Science Course (ESC-V)		
Semester: II	Total Hours Distribution per week		
Total Credit: 02	Lecture (L): 2 Hrs.	Tutorial (T): 0 Hr.	
Subject Code & Subject Name:	BT2CE04T / BT2AD04T/ BT2CS04T		Principle of Digital Electronics
EXAMINATION SCHEME			
Continuous Internal Evaluation (CIE)Marks	End Semester Examination (ESE) Marks	Minimum Passing Marks	Examination Duration
20	30	25	2 Hours

COURSE OBJECTIVES:

1. To discuss the fundamentals of digital systems, number systems, and signed number representation used in digital electronics.
2. To develop an understanding of Boolean algebra, logic gates, and logic simplification techniques for digital circuit design.
3. To justify knowledge of the design and analysis of combinational logic circuits using standard digital building blocks.
4. To discuss memory elements and sequential logic circuits used in digital system design.

COURSE OUTCOMES:

1. Apply number system conversions and signed number representations to solve digital arithmetic problems.
2. Implement Boolean expressions and design minimized logic functions using Boolean algebra and Karnaugh maps.
3. Design and analyze combinational logic circuits using adders, subtractors, multiplexers, decoders, encoders, and code converters.
4. Analyze and design sequential logic circuits using latches, flip-flops, registers, and counters.

SRPCE-ETC
Dr. Shireen V. Umale
BAS, Chairperson
Anurag Patil

Version-01(2026-27)

Dr. N. G. Hanale

Page 1

Dr. P. Agarwal

SYLLABUS

Unit I: Digital Systems and Number Systems: (08 Hours)

Introduction to Digital Systems, Analog vs. Digital Systems

Number Systems: Decimal Number System, Binary Number System, Octal Number System, Hexadecimal Number System, Number System Conversions, Signed Number Representation: 1's Complement, 2's Complement.

Unit II: Boolean Algebra and Logic Simplification: (08 Hours)

Basic Logic Gates: AND, OR, NOT Gates, Universal Gates: NAND and NOR

Boolean Algebra, Boolean Identities and Theorems, De Morgan's Theorems,

Canonical Forms: Sum of Products (SOP), Product of Sums (POS)

Logic Function Minimization using Karnaugh Maps (2, 3, and 4 Variables)

Don't Care Conditions.

Unit III: Combinational Logic Circuits: (08 Hours)

Design of Combinational Logic Circuits-Half Adder, Full Adder Half Subtractor, Full

Subtractor, Multiplexers and Demultiplexers, Encoders and Priority Encoders

Decoders, Code Converters.

Unit IV: Sequential Logic Circuits: (08 Hours)

Introduction to Sequential Circuits, Latches: SR Latch, D Latch

Flip-Flops: SR, JK, D, and T Flip-Flops, Characteristic Tables Excitation Tables,

Flip-Flop Conversions. Registers: Shift Registers (SISO, SIPO, PISO, PIPO)

Counters: Asynchronous (Ripple) Counters, Synchronous Counters, Mod-N Counters.

Text Books:

1. Morris Mano, 'Digital Electronics' 6th Edition, Pearson Education.
2. Anand Kumar, 'Fundamentals of Digital Circuits' 4th Edition, PHI Learning Pvt. Ltd.

B.TECH COMPUTER SCIENCE & ENGINEERING

B.TECH COMPUTER SCIENCE & ENGINEERING			
Course Category	Program Core Course -PCC-I		
Sem: II	Total Hours Distribution per week		
Total Credit: 02	Lecture (L): 02 Hrs	Tutorial/Activity(T/A): 00Hrs.	
Subject Code:	BT2CS05T	Computer Architecture And Organization	
Examination Scheme			
Continuous Internal Evaluation (CIE)Marks	Semester End Exam(SSE) Marks	Minimum Passing Marks	Examination Duration
20	30	25	02 Hours

Course Objectives

1	Enhance the knowledge of computer, instructions, handling data, performing ALU operations in Hardware, memory optimization of system behavior and understand the awareness in role of operating system.
2	To develop and enhance the skill in hardware and I/ O operations.

Course Outcomes

After successful completion of this course the student will be able to:

CO1	Interpret Register Transfer Language (RTL) statements to analyze the execution of basic computer instructions and data transfer operations,addressing modes. Mapped with Unit-I
CO2	Analyze data representation techniques, instruction sets, and computer arithmetic algorithms, including integer and floating-point operations, arithmetic circuits, multiplication, and division techniques, to explain data processing in computer systems. Mapped with Unit-II
CO3	Illustrate memory organization concepts, including memory hierarchy, cache memory organization, mapping techniques, replacement algorithms, and write policies to analyze and improve memory access performance in computer systems. Mapped with Unit-III
CO4	Apply concepts of input-output organization, I/O transfer methods, interrupt handling, instruction privileges, and process state transitions to analyze peripheral device communication and system performance. Mapped with Unit-IV

SYLLABUS	
Contents	No. of hours
Unit I: Basic Structure of Computers: Basic Functional blocks of a computer, CPU, Memory, Input-Output subsystems, control unit. Instruction set architecture of CPU, registers, instruction execution cycle, RTL Interpretation of instruction, addressing modes.	10
Unit II: Data Representation : Signed number, Fixed and floating point and character representation, addressing modes, Instruction set, Computer arithmetic-integer addition, subtraction, multiplication, shift and add, ripple carry adder, look-ahead carry adder, Floating point arithmetic, Booth's multiplier, carry save multiplier, Division- Restoring and Non Restoring techniques.	10
Unit III: Memory Organization: Concept of Memory hierarchy and Memory Interleaving, Cache memory (mapping techniques: direct, associative, set-associative) Cache size vs Block size, Mapping functions Replacement Algorithm, Write Policy.	09
Unit IV: Peripheral Devices: Input-Output subsystems, Characteristic, I/O Transfers program Controlled , DMA and Interrupt driven Privileged and Non Privileged Instructions, Software interrupts and Exceptions, Programs and process (role of interrupts in process state transition)	09

Total Credits : 2	Lecture (L): 2Hrs	Tutorial/Activity (T/A) : 0 Hr	
Subject Code	BT2ME06T/BT2CV06T/BT2EE06T /BT2ET07T/BT2CS06T/BT2CE06T	REFER TO IKS (Preserving Art, Culture and Traditions)	
Examination Scheme			
CIE	ESE	Minimum Passing Marks:	Examination Duration:
20 Marks	30 Marks	25 Marks	2 Hours

Course Objectives	
1	To recognize the perspective of Indian Knowledge System v(ICS) for national pride.
2	Sensitize the students to the contributions made by Indians in the field of philosophy, art and health.

Course Outcomes	
After completion of syllabus, students would be able	
1	Interpret basics of Indian Knowledge system.
2	Integrate the teaching of Indian culture and civilization.
3	Appreciate Indian artistic tradition.
4	Analyze Indian health and wellness system for healthy living.

SYLLABUS

Contents

No. of
hours

Unit I: Linux and Different Types Of Operating Systems:

Introduction to Operating Systems, Types of OS : Windows, Linux, Mac OS, DOS ,History of Linux, Linux Architecture, Linux Distributions, Linux Installation Steps.

12

Practical List :

1. Study and compare different operating system(Window, Linux , Mac OS, DOS, and Android) based on features, architecture, licensing and applications.
2. Explore the Linux boot process and verify basic system information such as kernel version, hostname, logged-in user, and operating system details.
3. Install Ubuntu Linux on a virtual machine (Virtual Box/VMware) or a physical system and explore the Linux desktop environment.

Unit II: Linux Terminal and Commands :

Introduction to Terminal File Commands : ls, cd, pwd, head, tail, touch ,rm, cp, cat, more, chmod, dir Process Management : ps, top, kill, bg, fg. System Information: date, cal, uptime, whoami, df, manfree, clear .Network Commands : ping, whois, dig.

Shortcut Keys: Ctrl+C, Ctrl+Z, Ctrl+D, Ctrl+W, Ctrl+U

14

Practical List :

1. Access the Linux operating system and execute basic terminal commands to retrieve user, system, and directory information.
2. Create, view, copy, rename, and delete files and directories using Linux file management commands.
3. Study process management by executing commands such as ps, top, bg, fg, and kill.

Unit III: Introduction To Shell Programming :

Shell basics, types of shell, shell script, Variables and environment variables, Conditional statements(if, if-else), Loops(for, while,), Functions in shell scripts, Command-line arguments Writing and executing shells scripts.

12

Practical List :

1. Identify different types of Linux shells and write, save, and execute a simple shell script.
2. Write a shell script to calculate the factorial of a given number using a for loop.
3. Write a shell script using functions to perform arithmetic operations (addition, subtraction, multiplication, and division).
4. Write a shell script to generate the Fibonacci series.

Unit IV: Shell Scripting and Linux Administration :

Shell and Shell Scripts, Linux Sessions, Standard Streams, Input/Output Redirection Pipes and Tee Command, Command Execution , Command-Line Editing, Quotes and Command Substitution , Job Control, Aliases and Variables , Environment Customization Introduction to: Apache Server, Mail Server , FTP Server.

10

Practical List :

1. Study Linux sessions, standard streams (stdin, stdout, stderr), and perform input/output redirection.
2. Study the installation and basic configuration of Mail Server and FTP Server services in Linux.

Case study: Create Linux control panel using Ubuntu Linux virtual machine (Virtual Box/VMware) system and explore the Linux desktop environment.

Reference Books Recommended:

Unit I Introduction to Digital Marketing

Topics : Fundamentals of Digital Marketing ,Traditional Marketing vs Digital Marketing 'Digital Marketing Ecosystem ,Digital Customer Journey ,Types of Digital Marketing ,Digital Marketing Channels ,Creating Google Account ,Creating Business Gmail ,Introduction to Canva , Digital Ethics and Cyber Security

10

Practical List :

1. Create a professional Gmail account for business.
2. Design a digital poster using Canva.
3. Create a Google Business Profile (Demo).
4. Compare traditional marketing with digital marketing using PowerPoint.

Unit II: Website Development & Social Media Marketing

Topics: Introduction to Websites ,Domain and Hosting,Website Builders ,Google Sites, WordPress Basics, Blogging,Social Media Platforms ,Facebook Business Page, Instagram Business Account ,LinkedIn Company Page .

10

Practical List :

1. Create a personal website using Google Sites.
2. Create a blog using Blogger or WordPress.
3. Create a Facebook Business Page.
4. Create an Instagram Business Profile and prepare five promotional posts.

Unit III: Search Engine Optimization (SEO) & Content Marketing

Topics: Introduction to SEO ,On-page SEO ,Off-page SEO ,Keyword Research,Google Search Console ,Content Marketing , Blog Writing ,AI Content Writing Tools ,Email Marketing Newsletter Design.

10

Practical List :

1. Perform keyword research using Google Keyword Planner.
2. Write and publish an SEO-friendly blog.
3. Design an email newsletter using Canva.
4. Create an email marketing campaign using Mailchimp (Free Version).

Unit IV: Online Advertising & Digital Campaigns

Topics: Google Ads ,Search Ads ,Dsplay Ads , Video Marketing , YouTube Marketing Facebook Ads , Instagram Ads , Influencer Marketing , Affiliate Marketing ,Campaign Budget Planning .

10

Practical List :

1. Create a Google Ads campaign (Demo Mode).
2. Design a Facebook advertisement.

[Handwritten signatures and notes at the bottom of the page, including names like Dr. P. S. Jayaram, Dr. A. Thakur, Dr. A. Malhe, Dr. S. B. D. B. and others.]

3. Create a YouTube promotional video.
4. Prepare a digital marketing campaign for a local business.

Unit V: Analytics, AI & Emerging Trends

Topics: Google Analytics, Website Traffic Analysis , Performance Metrics , ROI, Conversion Rate , AI in Digital Marketing , ChatGPT for Marketing , AI Image Generation , Marketing Automation, Future Trends in Digital Marketing .

Practical List :

1. Analyze website traffic using Google Analytics Demo Account.
2. Generate marketing content using ChatGPT.
3. Create AI-generated promotional images using Canva AI.
4. Prepare a complete Digital Marketing Report for a product or service.

08

Suggested Mini Project

Each student (or group of 2 students) should complete **one mini project** by applying the concepts learned during the course.

Examples:

- Digital Marketing Campaign for Engineering College
- Social Media Promotion for Local Business
- Product Branding using Canva
- SEO Optimization for College Website
- Online Promotion of Startup Idea

Suggested Software / Tools

- Google Workspace
- Canva
- Google Sites
- Blogger / WordPress
- Google Keyword Planner
- Google Search Console
- Google Analytics
- Google Ads
- ChatGPT
- Canva AI

All Are Online Free Vision Tools. Canva AI is Paid version.
